Hitech Systems, Inc. and Entrinsik, Inc. Partner to Deliver Real-time Reporting Capabilities to the Public Safety Market

May 13, 2008 - Hitech Systems, Inc., a leading public safety software solution provider, and Entrinsik, Inc. developer of Informer Web-based Reporting software, have announced a Partnership providing Hitech customers with an easy-to-use, feature-rich reporting tool for accessing data in real time.

By partnering with Entrinsik, Hitech Systems customers will now experience a fully integrated, familiar, intuitive platform for reporting, enabling them to easily and securely access data directly from Hitech's SafetyNet® public safety applications where and when they need it and view the information in HTML, Excel or PDF formats.

“Entrinsik presented Informer at Hitech's 2008 Annual SafetyNet Conference, and the response was incredible. We are bringing the Informer product to our market space as SafetyNet® EZReports under our umbrella of end-to-end Public Safety solutions. **EZReports** will allow our customers a web services reports creation capability that is unmatched in our industry,” said Jaime Lim, Hitech Systems Vice President of Business Development.

“Hitech Systems enables agencies to more effectively manage their data and resources to improve the quality of life in the communities they serve, and we chose Informer because it

provides an easy, intuitive way to quickly access and report on this critical information”, said Henry Unger, President of Hitech Systems, Inc.

“We are excited to have Hitech as a Partner,” said Doug Leupen, President of Entrinsik. “Like Entrinsik, Hitech’s success is a result of a continuous focus on customer service and satisfaction and we look forward to working with them to enable their public safety customers to turn critical data into valuable information where and when they need it.”

IBM, U2, UniData, and UniVerse are trademarks or registered trademarks of International Business Machines Corporation. SafetyNet is a registered trademark of Hitech Systems Inc.

About Entrinsik

Entrinsik, Inc. headquartered in Raleigh, NC provides software and services focused on the IBM U2 family of database products. Entrinsik's Informer Web Reporting System is the industry leader for reporting systems for UniVerse and UniData. Their SEMtek product is an enterprise solution for continuing education, training, and conference providers. Founded in 1984 and in the multi-value market since, Entrinsik aims to provide leading edge technology and unsurpassed service to their customers.
